

WG Tech Solutions Private Limited – www.wgtech.ai

WGTech helps accelerate the development & porting of AI models on Edge devices enabling efficiency and productivity in real-time. We provide Edge AI services to build, train and customize AI models on the controller of your choice ensuring power, performance and cost are optimized.

Our Services and Offerings

- Build Custom Models for your use cases
- Train Models for your use cases
- Deploy and productize trained models on hardware
- Test Inference of your use cases at the Edge
- Hardware Architecture, Product Manufacturing Support and Maintenance

CEO – Kannan Srinivasagam – [Linkedin Page](#)

Technology and product executive with diverse and extensive experience (25years) in engineering, business development, sales and marketing. Demonstrated track record of growing businesses in the industrial, automotive and consumer domains having delivered multiple products from marketing requirements for Silicon and system design to multi-year product shipments. Diverse skillsets including managerial, visionary leadership and technical account positions managing portfolios and teams in end-to-end product design and development. 6 Patents Issued.

Edge AI Engineer

Job description

Traditional AI Development:

1. Implement and enhance people analytics solutions using AI.
2. Develop and deploy object analytics models for various use cases.
3. Drive the creation and optimization of traditional AI-based solutions.

Generative AI Development:

1. Work on custom, Yolo and Llava-based Gen AI analytics for descriptive insights.
2. Develop advanced descriptive analytics using Vision-based Gen AI engineering.

Required Skills

Technical Expertise in Vision AI:

1. Proficient in image processing and computer vision technologies.
2. Hands-on experience with frameworks like OpenCV, TensorFlow, PyTorch, YOLO, and OpenVINO

Generative AI Expertise:

1. Experience in Vision-based Gen AI engineering, especially with Yolo, Llava models and building custom AI models.
2. Knowledge of multi-modal AI models encompassing vision, voice, and text.
3. Proficiency in prompt engineering.

Cloud Technologies:

- Familiarity with AWS, Azure, or Google Cloud Platform for AI/ML deployment.

Development Methodologies:

- Strong understanding of software development methodologies and best practices.

Preferred Qualifications:

1. Vision AI or Generative AI projects.
2. Excellent problem-solving skills and the ability to work on cutting-edge AI solutions.
3. Strong communication and collaboration skills.
